Autonomous-Ai-Security-Testing-Platform

- Clone / Download the github repo and open it in VS code
- Create a virtual environment by executing “python -m venv venv” in the terminal of vs code
- Then run “venv\Scripts\Activate” in the terminal of vs code to activate your virtual environment
- Install all the dependencies by executing a single command in vs code terminal
    - “ pip install -r requirements,txt && pip install -r requirements-extra,txt”

- Then run your pentest agent by executing “python ui.py” to load Interactive UI
- Run “python run.py --target shopco --target-model ollama_chat/llama3.1:8b --model gemini-3.6-flash --rpm 4 --rounds 3 --no-llm-judge” if you are required to test it with both Gemini and Ollama in a hybrid mode
- Run “python run.py --target shopco --model ollama_chat/llama3.1:8b --concurrency 1 --rounds 2 --attacks-per-category 1 --no-llm-judge” if you are only test want to test using Ollama
- Tweak the parameters like “ --concurrency 1 --rounds 2 --attacks-per-category 1” for better experimentation.
